Projects

GitMind – AI-Powered GitHub Analytics Platform

2026

Java, Spring Boot, PostgreSQL, React.js | Personal Project

- Designed and developed a RESTful backend using Java 21 and Spring Boot with a layered Controller-Service-Repository architecture.
- Integrated GitHub REST and GraphQL APIs to fetch repository, contribution, and profile data, and connected the Google Gemini API to generate AI-based developer insights.
- Implemented data persistence using PostgreSQL with Spring Data JPA, and used MapStruct for DTO-entity mapping.
- Built centralized exception handling and used Spring WebFlux for asynchronous calls to external APIs.
- Developed a responsive React.js frontend to consume the backend APIs and deployed the application on Vercel.

HealthLink – Healthcare Appointment Platform

VIT Bhopal & Johns Hopkins Health Hackathon | Team Project

- Engineered core Java backend modules for appointment scheduling and doctor-patient matching, using MySQL for persistent storage.
- Designed relational schemas and validation logic to enforce booking integrity and prevent scheduling conflicts.
- Built an emergency SOS feature to instantly alert on-call medical staff and share patient location during critical situations.
- Integrated an AI chatbot for basic medical query resolution and developed a pharmacy module enabling in-app medicine ordering.

Core Java Practice & DSA

Jan. 2026 – Present

Self-Learning | Remote

- Built multiple console-based Java projects applying OOP, Collections Framework, and exception handling.
- Solved 150+ Data Structures and Algorithms problems on LeetCode using Java.
- Maintained 500+ GitHub contributions across personal repositories.
